superfile Cheatsheet

Terminal file manager | command: spf | default hotkeys

INSTALL & LAUNCH

```
bash -c "$(curl -sLo- https://superfile.dev/install.sh)"
brew install superfile       # Homebrew
sudo pacman -S superfile     # Arch
winget install --id yorukot.superfile
scoop install superfile      # Windows
spf                          # start
spf pl                       # print config paths
spf -c <file>                # custom config.toml
spf --hotkey-file <file>     # custom hotkeys
```

NAVIGATION

`Up / k`	Move up
`Down / j`	Move down
`PgUp / PgDn`	Page up / down
`Enter / l / Right`	Open dir or file
`h / Left / Bksp`	Parent directory
`/`	Search current directory
`.`	Show / hide dotfiles
`o`	Sort options menu
`R`	Reverse sort order
`z`	Zoxide jump
`P`	Pin / unpin directory

PANELS & FOCUS

`n`	New file panel
`N`	Split file panel
`w`	Close focused panel
`Tab / L`	Next panel
`Shift+Left / H`	Previous panel
`f`	Toggle file preview
`F`	Toggle footer panels
`s`	Focus sidebar
`m`	Focus metadata panel
`p`	Focus process bar

FILE OPERATIONS

`Ctrl+n`	New file (end with / for dir)
`Ctrl+r`	Rename
`Ctrl+c`	Copy
`Ctrl+x`	Cut
`Ctrl+v / Ctrl+w`	Paste
`Ctrl+d / Delete`	Move to trash
`D`	Delete permanently
`Ctrl+p`	Copy file path
`c`	Copy current dir path

Anything that changes files needs Ctrl. No Ctrl, no accidents.

SELECTION MODE

`v`	Toggle Browser / Select mode
`Enter`	Select / deselect item
`Shift+Down / J`	Select while moving down
`Shift+Up / K`	Select while moving up
`A`	Select all in directory

Copy, cut, delete work on selections. Create/rename need Browser mode.

ARCHIVES & EDITOR

`Ctrl+a`	Compress to archive
`Ctrl+e`	Extract archive
`e`	Open file in $EDITOR
`E`	Open current dir in $EDITOR

OTHER

`?`	Help menu (all hotkeys)
`:`	Open command line
`>`	Open spf prompt
`q / Esc`	Quit
`Q`	Quit and cd to current dir
`Ctrl+c / Esc`	Cancel while typing

Q (cd-on-quit) needs a small shell wrapper; see the docs.

VIM PRESET DIFFERENCES

`a / r`	New file / rename
`y / x / p`	Copy / cut / paste
`d / D`	Trash / delete permanently
`Y`	Copy file path
`-`	Parent directory
`q`	Close panel
`Ctrl+c`	Quit
`Shift+Tab`	Previous panel
`m`	Toggle panel mode
`Ctrl+s/d/p`	Sidebar / metadata / process
`Ctrl+f`	Toggle footer

Copy vimHotkeys.toml from the repo over your hotkeys.toml. Unlisted keys match defaults.

CONFIG LOCATIONS

`Linux`	~/.config/superfile/
`macOS`	~/Library/Application Support/superfile/
`Windows`	%LOCALAPPDATA%/superfile/
`Files`	config.toml, hotkeys.toml, theme/

WORKFLOWS

`Copy across`	n, go to target, Tab back, Ctrl+c, Tab, Ctrl+v
`Bulk delete`	v, select items, Ctrl+d
`Find + edit`	/ name, Enter, e
`Jump`	z, type a recent dir, Enter
`Zip files`	v, select items, Ctrl+a

TIPS

`Fonts`	Install a Nerd Font or disable it in config
`Remap`	Each action is a list: ['ctrl+c', 'y']
`Avoid`	Ctrl+M, Ctrl+I, Ctrl+[(clash with Enter, Tab, Esc)

Source: superfile.dev (default hotkeys.toml). Press ? inside spf for the live hotkey list.
